

## Title: **Generating turnover report**

### **Precondition:**

- POS system is running.
- The user who is generating the report is logged in to the system.
- The user who is generating the report has rights to do so.

**Primary Actor:** Employee with the right to generate the report concerning some restaurant's turnover – Restaurant Manager, District Manager, Company Administration, Accountant.

### **Flow of Events for Main Success Scenario:**

- > 1. User with the rights to generate the report clicks on the menu item "Reports".
- > 2. After that chooses from the list of reports "Turnover".
- > 3. Enters the conditions for the report (for example starting and ending time, restaurant name etc).(a)
- > 4. Click on button "Generate"
- <- 5. POS system opens new window with report.

### **Flow of Events for Extensions**

- <- 2. (a) Power outage, network failure or requested data unavailable. User has to try again later.
- > 3. (a) User defines wrong conditions for the report (for example: starting time is before the system went live and has data about). System informs immediately the user about their mistake.
- <- 3. (b) User has no rights to view the information he/she wants to have on their report (for example restaurant manager wants to know the statistics of some other restaurant within their district).
- > 4. (a) Generating the report takes longer than it should. System informs the user that the query is taking longer than usual.
