Title: Add new user

Precondition:

➤ POS system is running.

➤ Manager is logged into the system.

➤ Manager is ready to enter new employee's information.

Primary Actor: Restaurant manager, district manager.

Flow of Events for Main Success Scenario:

→ 1. Manager chooses an option from the menu to "Add new user".

→ 2. In the opened window enters data: First name, last name, date of birth, e-mail address, home address, phone number, username and password.

→ 3. After all fields are filled the user presses the button to "Create new user".

← 4. POS system informs that new user has been successfully added to the database.

Flow of Events for Extensions

→ 2a Manager enters invalid data(username, password). System will give notification if data is irrelevant.

← 3a Power outage, network failure or requested data unavailable. System will restart and manager has to start the process all over.

← 2b There is already a user with such name. System will tell that entered username is already taken.

← 2c If the entered data about address, date of birth or e-mail is incomplete or incorrect, system will give feedback from the missing column

→ 4a. Manager has created a new user but needs to modify information. System allows appropriate user to modify information (restaurant manager, district manager).
